

Abstract

Cycle Test Method

The invention relates to a cycle test method for at least one rechargeable battery (1) having, in particular, a single-battery emergency lamp (2) as a load, wherein the battery (1) is
5 connected to a supply device (3) for charging/discharging at the location of use, comprising the following steps:

- i) charging the battery (1) by means of the supply device (3);
- ii) interrupting the charging for a time, in particular a specified time, in order to lower the temperature of the battery (1);
- 10 iii) discharging the battery (1) to a specified remaining voltage value; and
- iv) performing steps i) to iii) multiple times.
