(54) Title: BAIT MATERIALS, PEST MONITORING DEVICES AND OTHER PEST CONTROL DEVICES THAT INCLUDE POLYURETHANE FOAM

Fig. 9

(57) Abstract: In one aspect of the application, a termite bait, monitoring device or other termite control device includes a plurality of cellulosic food material pieces palatable to termites embedded within a water resistant polyurethane foam matrix. In another aspect, a termite bait, monitoring device or other termite control device includes a plurality of cellulosic food material pieces palatable to termites embedded within a water-absorbent polyurethane foam matrix. In another aspect a termite bait, monitoring device or other termite control device includes at least one cellulosic food material piece encapsulated within a water resistant polyurethane foam coating. In another aspect of the application, a termite control device includes a container, a cellulosic food material within the container and a water resistant polyurethane foam positioned to separate the food material from its environment. In another aspect of the application, a termite bait container includes a chamber containing a cellulosic food material and at least one pocket containing a polyurethane foam barrier to reduce intrusion of water through the pocket to the food material. In still another aspect of the application, a termite control device includes a container, a cellulosic food material within the container and a water-absorbent polyurethane foam scaffold that operates to hold moisture in contact with food material.
