

DATA ANALYSIS APPARATUS MANAGEMENT AND CONTROL METHOD AND COMMUNICATION APPARATUS

ABSTRACT

A management and control method for a data analysis apparatus and a communication
5 apparatus are provided. The method includes: A first management apparatus determines
configuration information of a data analysis apparatus, where the configuration information is used
to configure a data analysis function of the data analysis apparatus, and the configuration
information includes at least one of the following: state information, used to activate or de-activate
the data analysis function of the data analysis apparatus; and prediction capability information,
10 used to configure a data prediction and analysis capability of the data analysis apparatus. The first
management apparatus sends the configuration information. In this manner, management and
control for the data analysis apparatus are implemented, so that data analysis is properly and
orderly performed, to help reduce network operation and maintenance difficulties.
