FIG. 6

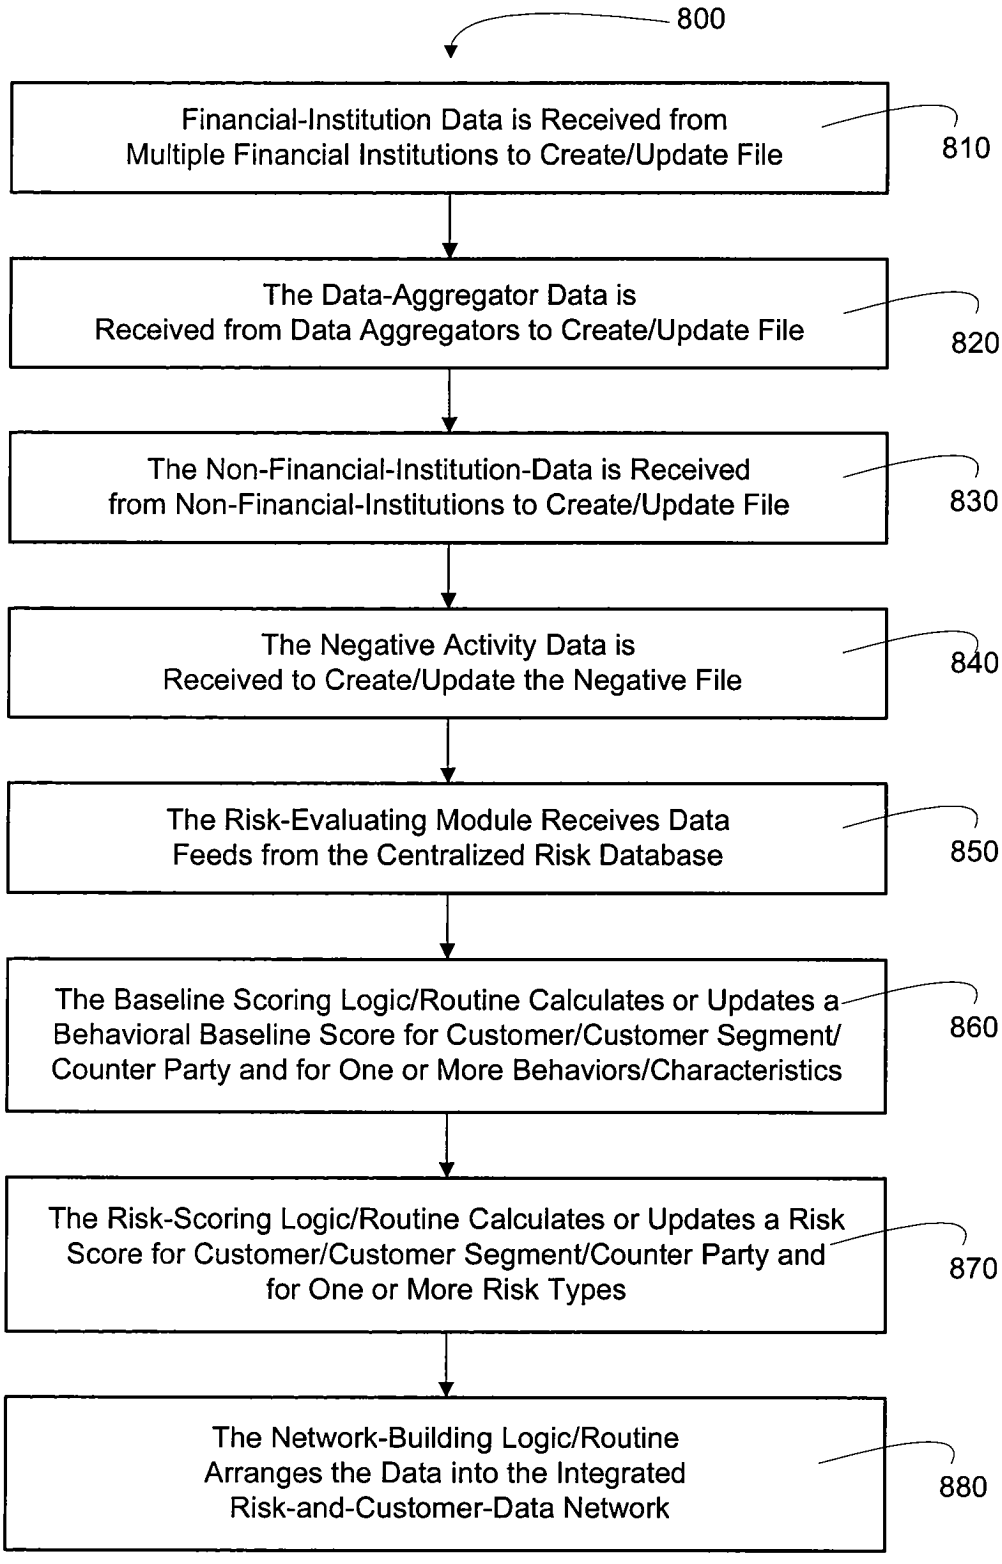

800
Financial-Institution Data is Received from Multiple Financial Institutions to Create/Update File
810
The Data-Aggregator Data is Received from Data Aggregators to Create/Update File
820
The Non-Financial-Institution-Data is Received from Non-Financial-Institutions to Create/Update File
830
The Negative Activity Data is Received to Create/Update the Negative File
840
The Risk-Evaluating Module Receives Data Feeds from the Centralized Risk Database
850
The Baseline Scoring Logic/Routine Calculates or Updates a Behavioral Baseline Score for Customer/Customer Segment/ Counter Party and for One or More Behaviors/Characteristics
860
The Risk-Scoring Logic/Routine Calculates or Updates a Risk Score for Customer/Customer Segment/Counter Party and for One or More Risk Types
870
The Network-Building Logic/Routine Arranges the Data into the Integrated Risk-and-Customer-Data Network
880

FIG. 7

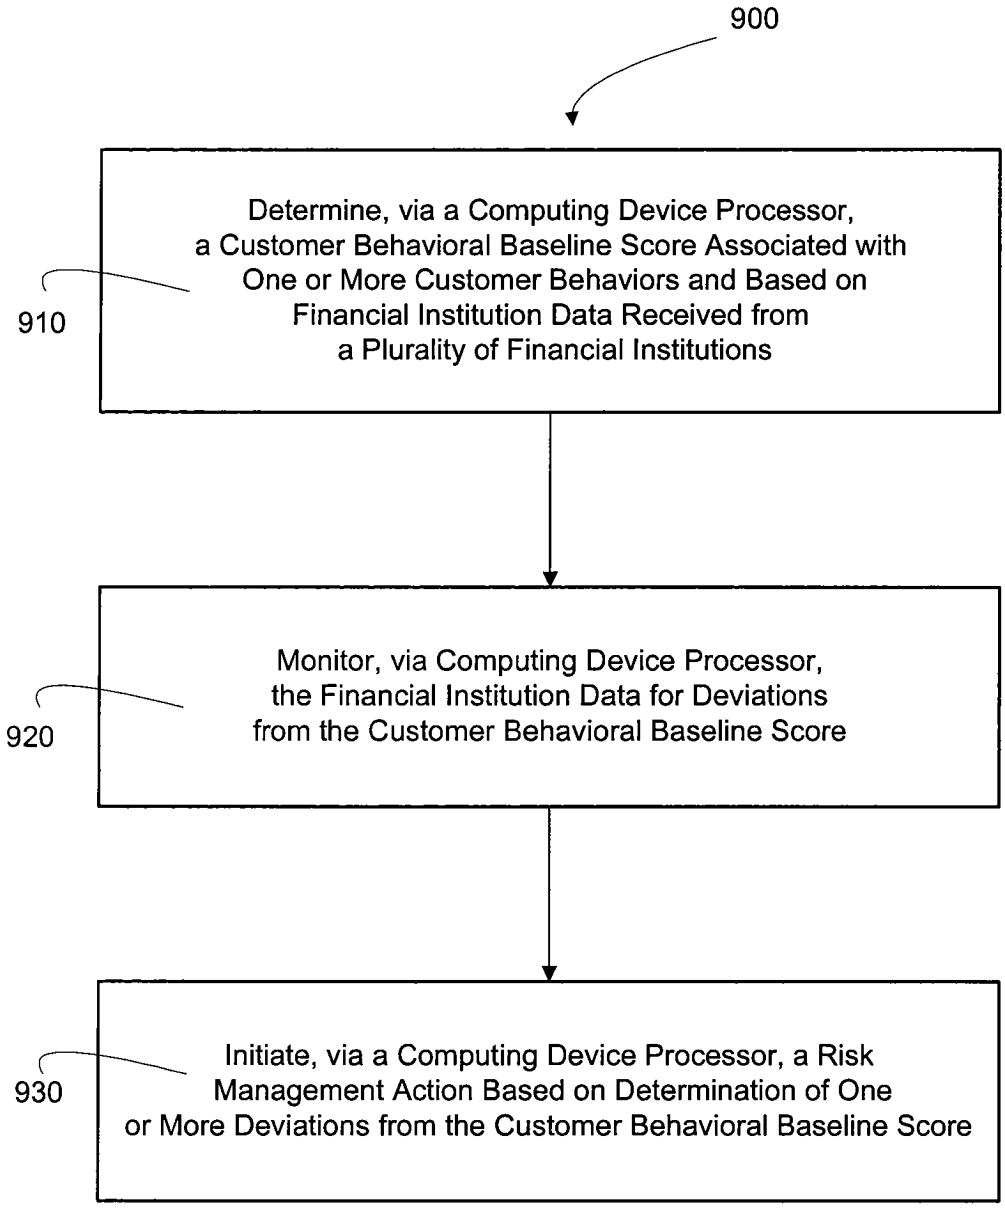

900
Determine, via a Computing Device Processor, a Customer Behavioral Baseline Score Associated with One or More Customer Behaviors and Based on Financial Institution Data Received from a Plurality of Financial Institutions
910
Monitor, via Computing Device Processor, the Financial Institution Data for Deviations from the Customer Behavioral Baseline Score
920
Initiate, via a Computing Device Processor, a Risk Management Action Based on Determination of One or More Deviations from the Customer Behavioral Baseline Score
930

FIG. 8

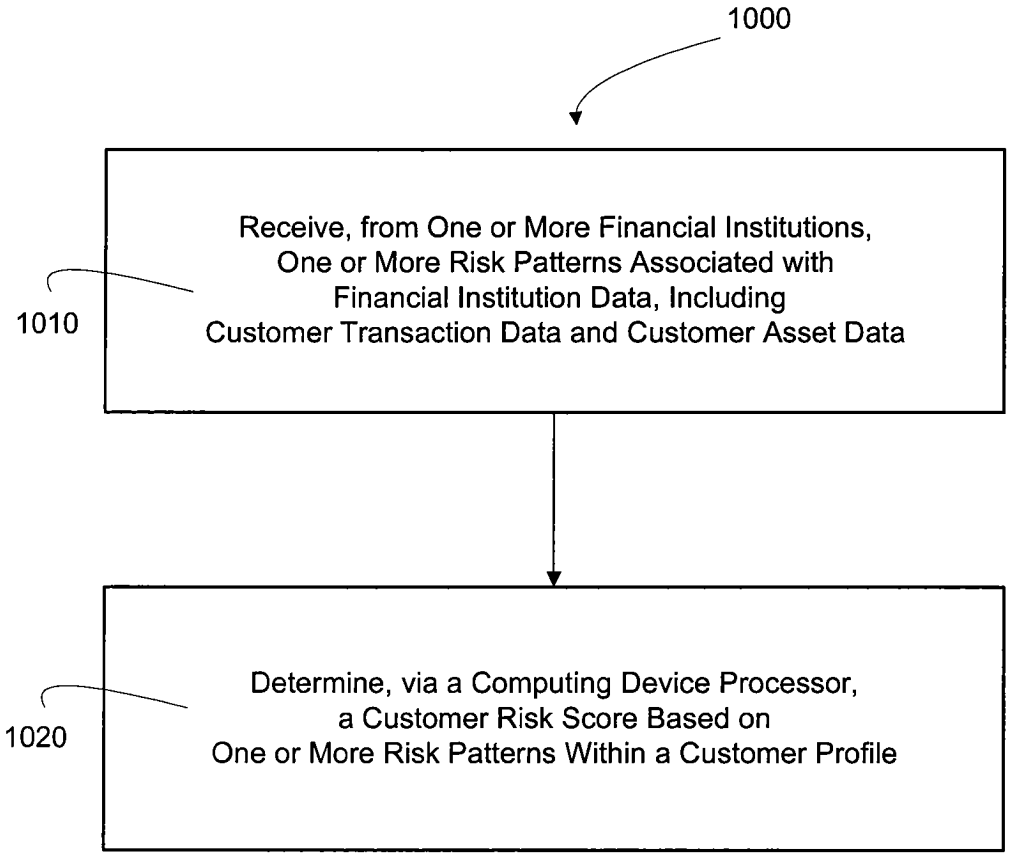

1000
Receive, from One or More Financial Institutions, One or More Risk Patterns Associated with Financial Institution Data, Including Customer Transaction Data and Customer Asset Data
1010
Determine, via a Computing Device Processor, a Customer Risk Score Based on One or More Risk Patterns Within a Customer Profile
1020

FIG. 9
