

ELEVATOR SYSTEM

ABSTRACT

According to one embodiment, when a first elevator is started and a registration device of a single elevator out of a plurality of second elevators other than the first elevator receives registration of a first destination floor from a user who has missed the first elevator, a controller of an elevator system is configured to assign a third elevator that is going to the first destination floor out of the second elevators to the user who has missed the first elevator and to cause a first notification device of the single elevator to make notification of a guide to the third elevator.
