

Abstract

BALANCE WEIGHT PARALLEL BODY

The present invention makes it possible to peel off all of multiple weights, which are aligned and bonded on a release tape, from a rim at one time. A parallel balance weight array is obtained by: providing multiple rectangular weights (1) of a specified weight in succession in a direction in which the weights adjoin each other on a long band-shaped release tape (3) via an adhesive layer (2); and disposing a single or multiple peeling bands (4), which are embedded in the adhesive layer (2), between the weights (1) and the release tape (3) in the direction in which the weights (1) adjoin.
