(54) Title: PREPARATION OF LOW-DUST STABILISERS ✓			
(57) Abstract			
A description is given of an extrusion process for the preparation of a low-dust stabiliser, using a sub-cooled melt as granulation liquid, as well as of novel amorphous modifications of different stabilisers, including 2,2'-methylenebis(4-[1,1,3,3-tetramethylbutyl]-6-benzotriazol-2-yl-phenol), and of the β -crystalline modification of 2-(2-hydroxy-3,5-di-tert-butylphenyl)-5-chlorobenzotriazole and of the preparation thereof. The novel process affords products which are easy to handle and which are flowable, and the novel modifications have advantages as regards their preparation, processing and their use as stabiliser.
