

[ABSTRACT]

A two-agent type dental adhesive composition includes a first agent; and a second agent. The first agent includes a (meth)acrylate compound
5 having an acid group, a (meth)acrylate compound having no acid group, water, and a water-soluble organic solvent. The second agent includes a multifunctional (meth)acrylate compound, a photopolymerization initiator, and a filler of 0 to
10 50 mass%. Both the first agent and the second agent substantially do not contain 2-hydroxyethyl methacrylate.
