A GLAZING SYTEM

ABSTRACT

A glazing system, more specifically a glass façade system is provided. The glass façade system includes a number of glass panels. In addition, the glass façade system includes a number of load distributors or support structures, more specifically rods and/or cables. The rods and/or cables are disposed or positioned at least substantially within the plane of the glass panels. Securing units are also disclosed. The securing units can be of different designs. A particular securing unit can include a set of receptacles for receiving rods. A given securing unit can include a set of receptacles for receiving rods, and a channel for receiving the cable.
