(54) **Title:** INPUT MAPPING REGIONS

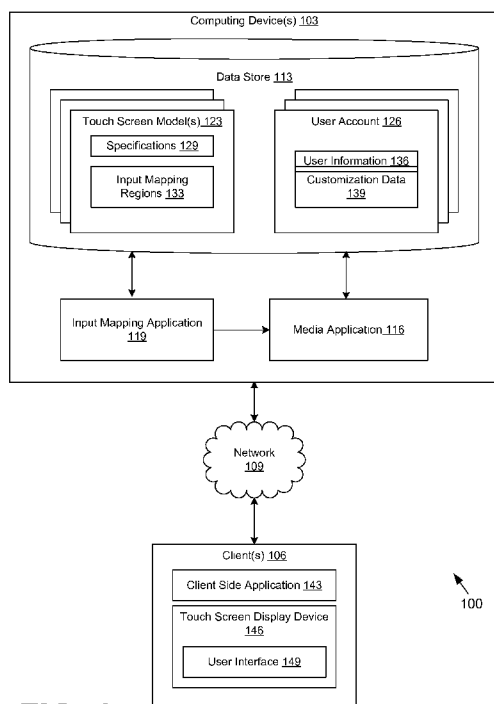

**FIG. 1**

(57) **Abstract:** Disclosed are various embodiments for implementing various forms of user actions on a touch sensitive device. A touch input generated on a touch screen display device is converted into a graphical user interface event. One or more touch input events are provided to the media application based at least in part on input from one or more clients. The touch input received from the client is mapped to a corresponding user action. The media application performs the user action, obtains the output data and sends the application stream to each of the clients.
