

A METHOD OF INSPECTION OF COVER TAPE IN SEALING POSITION ON A CARRIER**ABSTRACT OF THE DISCLOSURE**

A method of inspection of cover tape top sealing in position on a carrier tape having a plurality of pitch holes is disclosed. The method comprises the steps of :

- 5 installing a software system which is able to distinguish a sealing mark and defects formed on the carrier tape;

capturing an image of the cover tape, wherein the cover tape appears to be black, and the sealing mark formed on the carrier tape as white and in a straight continuation line, indicating that the cover tape is normal and the sealing is without defect; and wherein a discontinuation

- 10 line or a non-straight continuation line indicates that the sealing of the cover tape is improper.
