POWER SOURCE PLUG

ABSTRACT OF THE DISCLOSURE

A power source plug according to the present invention is inserted into an inlet of a power source receptacle for electrical connection, and includes a plug body made of an insulating material, a plurality of electrical connection terminals each of which is supported at one portion in an inside of the plug body and is inserted at a rest portion protruded from the plug body into the inlet of the power source receptacle, a gap filling member which is disposed at each of the electrical connection terminals for filling a gap between the electrical connection terminal and an inner surface forming the inlet of the power source receptacle and which is formed independently of the plug body, and a fixing means for fixing the gap filling member on the plug body.
