

ABSTRACT

This application relates to the field of media applications and provides a data processing method. The method includes: determining whether one or more trust indicators of a media asset correspond to a metric requirement, to obtain trustworthiness information of the media asset. The media asset may include media content. The media asset further includes at least one of metadata of the media content and a trust record of the media content. The trust indicator is an indicator related to a trustworthiness level of the media asset. A user may determine a trustworthiness level of the media asset based on the trustworthiness information.
