CIRCUIT BREAKER

ABSTRACT OF DISCLOSURE

An operating lever 24 is rotatably supported on a support member 21. An insulating operating rod 26 having ribs 26a is coupled between the operating lever 24, and a vacuum bulb 31 having: a movable contact 28 coupled to the operating lever 24; and a stationary contact 29 which is opposed to the movable contact 28. An insulating frame 23 is fixed to a support member 21 so as to elongate along the insulating operating rod 26. Ribs 23a are disposed on the face of the insulating frame 23 and opposed to the ribs 26a, so that the ribs and the ribs 26a alternately enter the gaps formed therebetween.
