

METHOD FOR PREPARING A DOCUMENT FOR ELECTRONIC PUBLICATION

ABSTRACT

5

In a document having columns 500A, 500B and 500C, text and non-text information are placed cells 501, 502, 503, 505, 507 and 508. In each line of text in each column 500A-C, a table is created and cells 501, 502, 503, 505 in the table are created in one line to
10 accommodate individual words. HTML tables and cells define display areas that can be better controlled to provide more consistent displays of pages when published and viewed by a variety of Browsers across computing platforms. Therefore a page produced using tables and cells advantageously provides consistent displays of
15 the page when published and viewed by a variety of Browsers across computing platforms
