COMMUNICATION METHOD AND APPARATUS

ABSTRACT

This application relates to a communication method and apparatus. The method includes: A first apparatus receives, at a first layer, a first data unit and a second data unit. The first data unit corresponds to a first number, the second data unit corresponds to a second number, and the second number is larger than the first number. When the first data unit is discarded, the first apparatus may send first information, where the first information may indicate that a data unit is discarded.
