(54) Title: COMMON APPLICATION METAMODEL INCLUDING C/C++ METAMODEL

(57) Abstract: A method of and a system for processing an enterprise application (FIGURE 2, #221) request on an end user application and an application server. This is accomplished by initiating the application request on the end user application in a first language with a first application program, and transmitting the application request to the server and converting the application from the first language (FIGURE 2, #209) of the first end user application to a language running on the application server, processing the application request on the application server, and transmitting the response from the application server back to the end user application, and converting the response from the language running on the application server to the language of the end user application (figure 2, #221).
