(54) Title: AREA VENTILATION DEVICES, SYSTEMS, AND METHODS

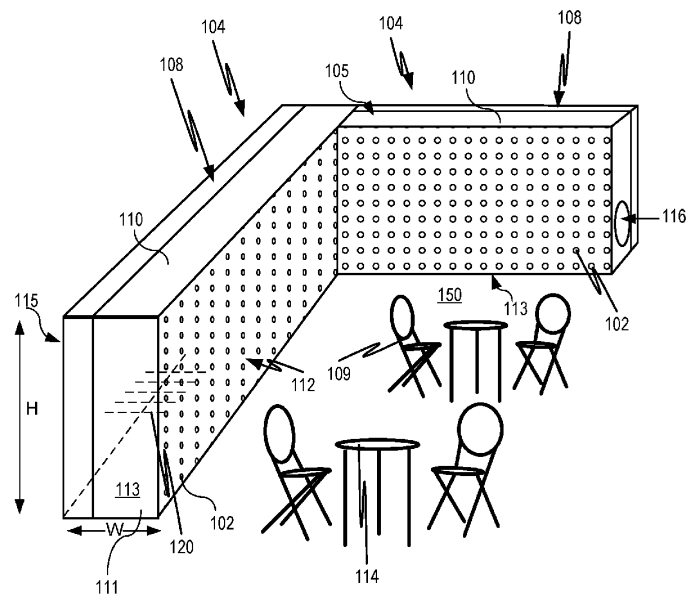

Fig. 1

(57) Abstract: One or more sections of a ventilated wall are provided around an outdoor space is not enclosed with a ceiling to form a fenced enclosure. Cooled air at a temperature colder than ambient temperature is supplied into the fenced enclosure through perforations in the wall and/or from an air-conditioned building adjacent to the fenced enclosure at displacement velocity to avoid disrupting stratification of air inside of the fenced enclosure. The cooled air pools inside of the fenced enclosure providing cooling for outdoor activities such as al fresco dining.
