AMINO ACIDS, NUCLEOTIDES AND VECTORS EXPRESSING THE SAME USES THEREOF IN PREVENTING SARBECOVIRUS INFECTION

ABSTRACT

The present disclosure relates to proteins, nucleic acids, vectors, vaccine molecules, immunogenic compositions, and uses thereof in the treatment or prevention of sarbecovirus infections. The disclosure also provides methods for treating sarbecovirus infections by administering vaccine molecules, and methods of identifying vaccine molecules for the treatment of sarbecovirus infections.
