(54) Title: USER-DEFINED GROUPS OF GRAPHICAL OBJECTS

FIG. 3B

(57) Abstract: In an example, a computer-implemented method to group graphical objects includes displaying, on a display device, a graphical diagram with multiple graphical objects that represent data of a data source. The method includes receiving input to define one or more groups. The method includes, in response to the input, generating one or more containers, each of the one or more containers representing a different one of the one or more groups; and graphically depicting membership of the graphical objects in the one or more groups by relative arrangement of the graphical objects and the one or more containers according to group membership of each of the graphical objects.
