

CELL PROLIFERATION MEDIUM FOR PRODUCING CULTURED MEAT

ABSTRACT

5 The purpose of the present invention is to provide a medium, in which cells to be used for
producing a cultured meat can be proliferated, by adding a food material as an additive. The present
inventors cultured cells with the use of food components as additives and, consequently, found
that when whey was added as a cell proliferation promoting agent, fibroblasts, adipocytes and
myoblasts exhibited high proliferation ability. Thus, the present invention, which pertains to a cell
10 proliferation medium comprising a basic medium and whey as a cell proliferation promoting agent,
has been completed.
