(54) Title: METHOD AND SYSTEM FOR OBTAINING, CONTROLLING, ACCESSING AND/OR DISPLAYING PERSONAL GENETIC IDENTIFICATION INFORMATION

(57) Abstract: A method and system for obtaining and controlling genetic identification information are disclosed. The method includes providing personal information of a registrant to a secure website using an electronic communication device, taking a genetic material-containing sample from the registrant, providing the sample to a genetic material analysis facility, analyzing short tandem repeat (STR) regions of the genetic material at a plurality of loci to produce a genetic identity for the registrant, recording the personal information and the genetic identity in a blockchain ledger, and enabling the registrant to display on another electronic communication device a code corresponding to the genetic identity. The system includes a genetic material sampling kit, a short tandem repeat (STR) analysis kit, and electronic communication device(s) configured to enter the registrant's personal information, record the personal information and the genetic identity in the blockchain ledger, and display a code corresponding to the genetic identity.
