METHOD AND SYSTEM FOR PROVIDING FINANCIAL TRANSACTION USING EMPTY CARD

ABSTRACT

A method and a system for providing a financial transaction using an empty card are provided. The method for providing a financial transaction using an empty card includes receiving, by a server, a virtual card number generated by a program included in a user terminal; searching, by the server, for a storage point at which the offline payment method is registered, in a storage point search algorithm based on the virtual card number; searching, by the server, for a real card number storage linked to the storage point in a storage location search algorithm; and extracting, by the server, a real card number stored in the real card number storage linked to the storage point.
