

ABSTRACT

A spectacle frame includes a front portion (1) configured to hold lenses (4a, 4b) and temples (2a, 2b) on both sides of the front portion 1, ring joint portions (3a, 3b) having a torsion coil spring shape are formed of a wire extending continuously from the front portion (1), a wire is further extended from the ring joint portions (3a, 3b) to form the temples (2a, 2b), whereby a joint portions is formed without using a screw, so that stable wearing is ensured in the case of being worn on the face. Simultaneously, locking strips (10a, 10b) configured to be locked with a coil portion of the ring joint portion (3a, 3b) at distal ends of resin-made tips (7a, 7b) fitted by insertion on distal end portions of the temples (2a, 2b) are provided, so that the distal end portions of the temples can be locked reliably with a portion in the vicinity of the joint portions.
