(34) Title: A CONTAINER HAVING PRESSURE RESPONSIVE PANELS

(57) Abstract

A container (1), suitable as a hot-fill container, includes a controlled deflection flex panel (2) which may invert and flex under pressure, such as hot-fill conditions, to avoid deformation and permanent buckling of the container (1). The flex panel (2) includes an initiator portion (8) which has a lesser projection than the remainder of the flex panel (2) and initiates deflection of the flex panel (2).
