

ABSTRACT

The embodiments of the present disclosure relate to the technical field of computers. Disclosed are a page display method and apparatus, and a device and a storage medium. The method comprises: playing a target video in a preset page; and displaying in the preset page an object identifier set associated with the target video, wherein the object identifier set comprises object identifiers respectively corresponding to a plurality of explanatory objects associated with the target video, the object identifier set comprises a first object identifier displayed in a first display mode and a second object identifier displayed in a second display mode, the first object identifier is used for triggering a preset interaction event of a corresponding explanatory object, the first object identifier comprises an object identifier corresponding to a first target explanatory object, and a display state of the first target explanatory object meets a preset condition. By using the technical solution, the automatic change of an object identifier display mode can be realized according to a display state of an explanatory object, thereby helping to improve the viewing experience and interaction experience.
