(54) Title: MANAGEMENT OF AIR-BORNE VIBRATION

FIG. 8

(57) Abstract: A storage device testing system that includes a rack and a vibration management material. The rack includes at least one test slot that is configured to receive a storage device for testing. The test slot is substantially exposed to air on at least one side. The vibration management material is capable of absorbing and/or diffusing air-borne vibration. The vibration management material is disposed so as to attenuate air-borne vibration coupled to the test slot.
