

TITLE OF THE INVENTION: CLEANING DEVICE

ABSTRACT

A cleaning device (100) includes a main body portion (10), a dust cup (11), and a dust scraping assembly. The main body portion (10) includes a first filter (12). The dust cup includes a cup body (111) and a cup cover (112). The cup body (111) is connected to the main body portion (10) and covers an outer side of the first filter (12). At least a part of the dust scraping assembly is disposed around the outer side of the first filter (12), and is configured to move in a reciprocating manner along an axial direction of the first filter (12), so as to scrape off dust from the first filter (12).
