(54) Title: MATCHING COSMETICS AND SKIN CARE PRODUCTS BASED ON SKIN TONE AND SKIN CONDITION SCANNING

FIG. 8B

(57) Abstract: Scanning a person's skin allows one to more easily find products that match their skin tone and skin condition. A skin scan can assist one to determine what products are appropriate for them and then purchase them from a retailer. A scanning device is used to scan one or more locations of a person's skin. For example, two different locations of a person's face can be scanned, such as the forehead and cheek. An additional third scan may be near the person's eyes. The scan determines skin tone and skin condition results for the person's skin. These results can be used to determine and present a listing of products that are appropriate for the person's skin tone and skin condition.
