(54) Title: CLOSING STATION, CAPSULE FILLING MACHINE AND METHOD THEREOF

FIGURE 2C

(57) Abstract: The present invention discloses a closing station (100) for a capsule filling machine comprising a bottom (110) and a top closing unit (120) configured to displace towards each other, such that bottom pins (112) associated with said bottom closing unit urge into through holes of a body holder (B) to contact closed ends of each filled capsule body sections (114) and sliding them into said open ends of each capsule cap sections (124), such that each capsule is partially closed against an exerting pre-compressive force of the top pins (122) and is completely closed when force against biasing means (130) of said top pins (122) is exerted for providing telescoping closing of the cap (124) and body (114) sections of each capsule.
