(54) Title: DEVICE AND METHOD FOR INDICATING AN EVENT OF ADMINISTRATION . (57) Abstract A device for indicating an event of administration is equipped with an indicator for registering an event of administration of a usually regularly administrable medicament. The indicating device (2) comprises a detector means (7) which is arranged to detect the mechanical movement of a medicament dosage unit (1) taking place in connection with an event of administration. The indicating device (2) comprises a registration means which is arranged to register information about the event of administration in the indicating device (2). The indicating device is a separate unit which can be attached to the medicament dosage unit (1) or in which the medicament dosage unit can be placed, and it can be used for example for monitoring the dosage of insulin in the treatment of diabetes.
