(54) Title: METHOD FOR IMPROVED BREAST MILK FEEDING TO REDUCE THE RISK OF ALLERGY

(57) Abstract: Selected strains of Lactobacillus and products containing cells of the selected strains to improve breast milk for feeding to babies, more precisely to increase the levels of the anti-inflammatory cytokine IL10 in the milk and reduce the risk that the feeding baby will develop allergies and simultaneously reduce the cause and thereby the amount of TGF-beta-2 in the milk, thus resulting in reduced risk for the lactating mother to develop mastitis.
