

Abstract

Disclosed are a method for transmitting configuration information and a communication device~~an information transmission method and apparatus, a communication device, and a storage medium~~. The ~~configuration information transmission method comprises~~includes: sending, by a base station, configuration information respectively for a first type of user equipments (UEs) and a second type of UEs; an access configuration of the first type of UEs indicated by the configuration information is independent of an access configuration of the second type of UEs indicated by the configuration information; the access configuration of the first type of UEs is configured to be used by the first type of UEs for network access, and the access configuration of the second type of UEs is configured to be used by the second type of UEs for network accessissuing configuration information for a first type UE and a second type UE, respectively, wherein the maximum bandwidth supported by the first type UE is less than the maximum bandwidth supported by the second type UE; an access configuration, which is indicated by the configuration information, of the first type UE is independent of an access configuration of the second type UE; the access configuration of the first type UE is used for the first type UE to access a network; and the access configuration of the second type UE is used for the second type UE to access the network.
