(including a substantially rectangular shape). Moreover, the engagement portion 111 is not necessarily in, e.g., a continuously-formed annular raised shape and/or recessed shape as described later, and may be in, e.g., a non-continuously-formed raised shape and/or recessed shape with a cutout. Further, in the present embodiment, in a case where the raised shape and/or the recessed shape of the engagement portion 111 are the substantially polygonal shape, a corner thereof may be designed as a round corner.

[0024]

The specific shape of the engagement portion 111 is preferably a raised shape having a recessed portion at the center. The recessed portion is provided at the center so that the engagement portion 111 can be easily engaged with, e.g., a support 55 of the holder 50 described later.

[0025]

A more specific shape of the engagement portion 111 is preferably a substantially circular ring raised shape such as a substantially oval ring raised shape, and particularly preferably a substantially oval ring raised shape shown in FIG. 1. Such a shape is employed so that the engagement portion 111 can be more easily engaged with, e.g., the support 55 of the holder 50 described later. Particularly, the substantially oval ring raised shape is employed so that as compared to the case of the
