

DESCRIPTION

2 in 1 CIGARETTES PACKAGING WITH A 'CLICK' OPENING SYSTEM AS CONTAINER FOR ALL KINDS OF CIGARETTES EQUIPPED WITH MATCHES AND STRIKING PAPER

The mechanics of the invention

This invention concerns with commonly used cigarettes packaging, particularly the packaging of cigarettes provided with a 'CLICK' system at the opening and underneath is a space provided for matches and its striking paper.

The background of the invention

The packaging of cigarettes functioning as a wrapping for cigarettes must meet several requirements, among others : handy in its carrying and keeping, reducing or avoiding contamination with the air outside, reducing the effect caused by the heat of the sun or by humidity and convenient when taking it at the time one is going to smoke. So far, most of the packaging are made of card-paper and in the inside the cigarettes still have to be wrapped in aluminum foil in order that the quality of the taste and the aroma of the cigarettes are stable and the outside of the packaging is wrapped in a clear plastic foil.

Up to this moment cigarettes packaging only serves as a wrapping, so people have to reach for a lighter from some other place separated from the cigarettes packaging mentioned when they want to smoke. In the present invention, the cigarettes packaging, the matches and the striking paper are all in one packaging, so that it is not necessary to look for a lighter at a separate place when one wants to light a cigarette, because underneath the packaging there are matches and their striking paper which form one unit. To make it more practical, the number of matches exceeds the number of cigarettes.

A summary of the Invention

To maintain the taste and aroma of all kinds of cigarettes, the quality of the packaging is a determining factor.

Every time a smoker wants to smoke, he has to get hold of a lighter as so far the cigarettes and the lighters are available separately. In order to make it more handy, a 2 in 1 cigarettes packaging has been invented using a 'click' opening system, which can accommodate all kinds of cigarettes and underneath the packaging, matches and their striking paper are available as one unit without diminishing the function of packaging and it still meets the requirements of the packaging of all kinds of cigarettes explained above.

A Brief Explanation of the Drawings

Figure 1 is a line configuration view of the 2 in 1 cigarettes and matches packaging using a 'CLICK' opening system conform to this invention;

Figure 2 is a line configuration view of the 'CLICK' (10) opening system conform to Figure 1;

Figure 3 is a line configuration view of the inner parts of the packaging (11) conforming to Figure 1;

Figure 4 is a line configuration view of the outer parts of the packaging (12) conforming to Figure 1; and

Figure 5 is a line configuration view of the placement of matches and their striking paper (13) conforming to Figure 1.

A comprehensive explanation of the Invention

Referring to the drawings of the invention, the 2 in 1 cigarettes and matches packaging using the 'CLICK' opening system (Figure 1) consists of four parts as follows:

1. 'CLICK'(10) opening system

This is an additional device made of elastic plastic or metal (Figure 2) fitted in the inner side which lies on the fold (10a) and under the opening fold (10b) at the outside of the cigarettes packaging (12) ;

2. The inner side of the packaging (11)

This is the cigarettes packaging part placed in the inner side (Figure 3) at the outer side (12) of the packaging by sticking the outer side of the inner part of the packaging with the inner side of the outer part of the packaging (12)

It should be noticed that sticking the outer side of the inner part of the packaging (11) with the inner side of the outer part (12) of the packaging should be done evenly so that it sticks tightly. As there are no air pockets, the smell of the matches and the striking paper (13) can be excluded and so it will not have effect on the taste and the aroma of the cigarettes.

3. The outer part of the packaging (12)

This is the outer part of the packaging and how to make the outer part of the packaging (12) is illustrated by the line configuration of the outer part of the packaging (Figure 4), it is shown / drawn in detail and clearly by the line configuration of the outer part of the packaging prior to being attached/set up (12a) , and the line configuration of the outer part of the packaging after being attached (12b).

4. The matches and their striking paper (13)

This is a packaging for the matches provided with the accompanying striking paper (13c) placed underneath the matches packaging, so that it will not cause any staining when kept in the pocket of one's clothing, besides this is to prevent the striking paper from becoming damp when the cigarettes packaging is held in sweating or wet hands. The line configuration of the matches and striking paper packing (5) illustrates how to make the packaging for the matches and the striking paper (13), in more detail and more clearly it is shown/drawn by the matches packaging prior to being attached/set up (13a), the line configuration of the matches and striking paper packaging after being attached/setup (13b) and the line configuration of the striking paper (13c). In this part special attention should be given to the attachment/fitting of the striking paper; it has to be placed underneath the matches and striking paper packaging after being set up/ attached (13b).

The preceding explanation of the invention is represented for the purpose of illustration and description. It should be understood that what has been explained is not limited to only those mentioned above. The consequence is that all variations and modifications that can be made by the experts upon the 2 in 1 cigarettes packaging using the 'CLICK system as explained above is considered as inclusive in this invention.

CLAIMS

1. A 2 in 1 cigarettes packaging, that is packaging for all kinds of cigarettes equipped with matches and striking paper contained in one package.
2. 2 in 1 cigarettes packaging conforms to claim 1 with a 'CLICK' (1) opening system, which comprises:
 - the 'CLICK' (10) opening system;
 - the inner parts (11) of the cigarettes packaging;
 - the outer part (12) of the cigarettes packaging;
 - the matches and its striking paper unit;which is characterized by the placing of the 'CLICK' opening system, the outer part of the inner cigarettes packaging (11) is closely attached to the inner part of the outer cigarettes packaging (12), and the placing of the matches with the striking paper (13) which is placed under the outer cigarettes packaging (12) which can be opened by pushing through the push-hole.
3. The 2 in 1 cigarettes packaging (2) according to claim 1-2, *which is characterized* by the "CLICK' opening system of the cigarettes packaging, the inner cigarettes packaging (11), the outer cigarettes packaging (12), and the packaging of the matches and the striking paper (13) is one unit.
4. The 2 in 1 cigarettes packaging (Figure 1) conforms to claim 1-3, *which is characterized* by the system of an even gluing at the spot between the inner cigarettes packaging (11) and the outer cigarettes packaging (12), those two parts being so tightly glued that no air pockets exist causing the cigarettes to be free from the smell coming from the matches and the striking paper (13).
5. The 'CLICK' opening system of the packaging conforms to claim 1-4, *which is characterized* by its consisting of two pieces of plastic or metal (Figure 2) which are laid between the folds and under the folds of the outer packaging (12).
