IC MOUNTING/DEMOUNTING SYSTEM AND MOUNTING/DEMOUNTING HEAD THEREFOR

ABSTRACT OF THE DISCLOSURE

An IC mounting/demounting system comprising a centering unit including first and second centering tools where socket pushers are constructed integrally with centering recess portions respectively. The centering unit is detachably fitted to a head body and replaceable with a centering unit corresponding to an IC having a different size. Accordingly, the replacement of the whole mounting/demounting head that normally accompanies the change in the kind of IC becomes unnecessary, thus enhancing work efficiency.
