ABSTRACT

A Compound represented by the following general formula (1), salts thereof or hydrates of the foregoing is a novel compound useful for treatment and/or prevention of diseases associated with thrombus formation, and which is safer with suitable physicochemical stability.

(1)

[wherein R^{1a}, R^{1b}, R^{1c} and R^{1d} each independently represent hydrogen, etc.; R^2 represents optionally substituted phenyl, etc.; R^3 represents optionally substituted C6-10 aryl, etc.; and Z^1 and Z^2 each independently represent hydrogen]
