(54) Title: SYSTEM AND METHOD FOR BLOCKING HARMFUL INFORMATION ONLINE, AND COMPUTER READABLE MEDIUM THEREFOR

(57) Abstract: A system and method for diagnosing, remedying and blocking harmful information including computer viruses online over a computer network via which a web server and a client are linked to each other. The method includes, on a computer network through which a web server and a client system are linked to each other, the web server receiving a connection request from the client system over the computer network. Then, the web server transmits a harmful information blocking code module to the client system. Once the transmission of the harmful information blocking code module is completed, the harmful information blocking code module automatically runs on the client system to block in real time harmful information including computer viruses. The harmful information blocking code module is automatically transmitted to and installed in the client system only by online connecting to the harmful information management server, so that the harmful information detected on the client system can be actively blocked in real time without requiring a manual installation process.
