

ABSTRACT

TITLE: TERRACOTTA TILE ROOF HANGING SYSTEM, AND TERRACOTTA TILE MOUNTING METHOD AND STRUCTURE

5 Disclosed in the present invention are a terracotta tile roof hanging system, and a terracotta tile mounting method and structure. The terracotta tile roof hanging system comprises a keel seat, a semicircular terracotta tile mounting assembly, a shaft seat, and a planar terracotta tile mounting assembly, wherein the keel seat comprises a base, and a back seat and a supporting seat, which are on the base; the semicircular terracotta tile mounting assembly comprises a
10 hanging seat and a cambered plate on the hanging seat, the cambered plate being provided with an insertion connection member, and the hanging seat being adjustably arranged on the back seat; the shaft seat is arranged on the back seat through a transverse bolt and is provided with a shaft hole; and the planar terracotta tile mounting assembly comprises a U-shaped auxiliary frame and a shaft plate on the U-shaped auxiliary frame, wherein a tail end of the shaft plate is
15 hinged in the shaft hole of the shaft seat, a notch of the U-shaped auxiliary frame is a mounting clamping opening of a planar terracotta tile, and the U-shaped auxiliary frame is provided with a locking bolt. The present invention can adjust the integral curved surface and the integral gradient of the planar terracotta tile, and the integral gradient of the semicircular terracotta tile, so that integral decoration and styling requirements of a terracotta tile roof are met. **Figure 6.**
