

ABSTRACT

A resource recovery system 1 for recovering articles to be recycled as a resource includes a plurality of resource recovery apparatuses 100 that recovers the discarded articles by a person discarding waste and a server apparatus 200 that manages the plurality of resource recovery apparatuses 100. The server apparatus 200 generates suggestion information including information indicating a suggestion for a location of a target resource recovery apparatus 100, based on a utilization result and a location of each of the plurality of resource recovery apparatuses 100. The target resource recovery apparatus 100 is the resource recovery apparatus 100 to be newly placed and/or the resource recovery apparatus 100 that has been located and of which location is to be changed.
