(54) Title: EDGE COMPUTE ENVIRONMENT CONFIGURATION TOOL

FIG. 1A

(57) **Abstract:** A tool is provided to configure an edge compute environment of a network. The edge compute network configuration tool may generate a configuration process for instantiating an edge compute environment at an edge site of a network including configuring one or more of the components of the edge compute environment. The configuration process may include generating automatically executed configuration instructions that communicate with the devices of the edge compute environment to configure operational processes of the devices, provision communication ports, establish one or more network addresses with the devices, etc. In some instances, the edge compute configuration tool may execute one or more micro-services to communicate with and control configuration of the devices of the edge compute environment. In addition, in some instances, a content delivery network may be used to deliver configuration data to the device being configured.
