Question

In cirrhosis patients admitted to the ICU with septic shock, do those treated with vancomycin, daptomycin, or linezolid have better outcomes (30 day mortality, ICU LOS, days on vasopressor) than those who are not?

Submit

Result

Population: Cirrhosis patients admitted to the ICU with septic shock.

Intervention: vancomycin, daptomycin, linezolid

Control: No treatment with vancomycin, daptomycin, or linezolid

Outcome: 30-day mortality, ICU length of stay, days on vasopressor

Timeframe: Not specified
