

PACKAGING CARTON AND BLANK SHEET FOR PACKAGING CARTON

Abstract

5 A top panel to be raised for display at the point-of-purchase is less prone to wrinkles or folds and thus achieves attractive display of the contents. A packaging carton and a blank sheet for the packaging carton are configured such that the packaging carton (1) includes a
10 bottom panel (10), a top panel (50), a front wall (20), a rear wall (30), and opposing side walls, the top panel (50) including a rear top panel (501) connected to an upper end of the rear wall (30) and a front top panel (502) connected to the rear top panel (501) by a first
15 fold line (L51), wherein a second fold line (L52) is formed adjacent to the first fold line (L51), and the rear top panel (501) and the front top panel (502) are to be raised by folding the top panel (50) along the second fold line (L52).
