

## A B S T R A C T

AN ELECTRICAL DISCONNECTOR DEVICE FOR A POLYPHASE  
ELECTRICITY METER

5

The invention relates to an electrical disconnecter device (1) suitable for use together with a polyphase type electricity meter, comprising N subassemblies each constituted by a current circuit and by a voltage  
10 circuit, and including a spring blade (7) that serves at rest to provide an electrical connection between a terminal (5) of the current circuit and a terminal (6) of the voltage circuit. The meter has N openings (13) for accessing each blade from outside the meter. The device  
15 comprises a support (10) carrying N extensions (11a-11c) extending parallel to one another, presenting respective free ends (12a-12c), and placed along the support (10) in such a manner as to enable them to be inserted  
simultaneously into each of the N openings (13) by a  
20 single operation of manipulating the support, each free end (12a-12c) acting simultaneously on the corresponding blade to disconnect each electrical connection.
