(54) Title: DISC MASCARA APPLICATOR

(57) Abstract: A cosmetic applicator which has an array of independent discs which compress during withdrawal from a container so that excess product can be removed from the applicator by a wiper. After passage through the wiper, the discs return to their expanded position by the action of a spring. The compressing of the discs during withdrawal allows a controlled amount of product to remain on the applicator for application by the consumer, and the returning of the discs to their expanded position by the spring causes the discs to assume a configuration which allows the applicator to effectively comb and separate the eyelashes.
