

ABSTRACT**Identification document comprising a two-dimensional barcode**

The present invention relates to an identification document (12) including a physical substrate bearing at least one alphabetical inscription for identifying the bearer of the document, and at least one two-dimensional barcode (20) for identifying the bearer of the document. It includes at least two two-dimensional barcodes (20) on which are encoded mating portions of a same identification file (IF_{ID}) of the bearer of the document.
