(54) Title: FILTRATION

FIG. 1

(57) Abstract: Biomass feedstocks (e.g., plant biomass, animal biomass, and municipal waste biomass) are processed to produce useful products, such as fuels. For example, systems are described that can be useful for separating solids from liquids of saccharified biomass material slurries. Many potential lignocellulosic feedstocks are available today, including agricultural residues, woody biomass, municipal waste, oil-seeds/cakes and seaweed, to name a few.
