

FIG. 1

In a dual-connectivity mobility management procedure, UE performs a target operation on first uplink data according to first information

201

FIG. 2

In a case that a transmission path for first uplink data has changed to a first path, no uplink resources are allocated to a target channel for a second path according to a target uplink grant

201a

In a dual-connectivity mobility management procedure, UE performs a target operation on first uplink data according to first information

201

FIG. 3

In a case that UE receives a mobility management command, the UE marks a first path as a path capable of transmitting uplink data, and/or marks a second path as a path incapable of transmitting target uplink data

201b

In a dual-connectivity mobility management procedure, the UE performs a target operation on first uplink data according to first information
