

ABSTRACT

The present invention provides a translucent sound-absorbing panel capable of improving sound absorbability and additionally improving translucency and transparency. An internal perforated plate 4 having a large number of thorough-holes 14 is placed between a front perforated plate 2 and a back perforated plate 3. The internal perforated plate 4 includes a material having translucency and transparency, a plate thickness thereof is 0.2 mm or more and 1.5 mm or less.
