

FACE RECOGNITION ATTENDANCE SYSTEM

ABSTRACT

This utility model provides a face recognition attendance system, including a mobile device installed with an attendance application, including a camera unit, where a face image of a user is obtained by using the camera unit and the face image data is transmitted; and a server terminal device, obtaining the face image by connecting to the mobile device through the Internet, where the server terminal device further includes: a storage unit, configured to store attendance data and image data; and a processing unit, comparing the face image to the image data stored in the storage unit and generating comparison result information, where a corresponding attendance interface is generated in the mobile device based on the comparison result information.
